YOUR STINGRAY PARTS WASHER SHIP DATE: 10-May, 2017

Hi Luke and Gene,

Your new StingRay is starting the finishing of the cabinet phase. The cabinet is complete and the welding process of attaching the mounting brackets to the machine shell for mechanical and electrical components is underway. During this phase the pumps are installed with their motors, the turntable and drive is installed, the rinse system, heat exchanger, manifold, manifold drive and other accessories are installed. Soon your washer gets water tested under full pump pressure before it is painted. Your New StingRay is scheduled for water testing on 21-April, 2017.

Included are progress photos for your review. As always, we encourage you to visit our [YouTube Channel](#) for more videos, pictures, and information.

Warm Regards,
Cathy Cooper

YOUR STINGRAY PARTS WASHER SHIP DATE: 26-June, 2017

Hi Sean and Richenda,

In the past week, StingRay finished the base of your washer and performed a complete water test on the base weld seams for water tightness. The turntable is under construction and the door components are near completion. StingRay fabricators are currently working on your manifold, scraper and other sub-assemblies. Next week, your new StingRay enters the cabinet phase. This is when it really begins to look like a parts washer!

Included are progress photos for your review. As always, we encourage you to visit our [YouTube Channel](#) for more videos, pictures, and information.
